245 MODEL TRAY SEALER

FOR PLASTIC OR
PAPERBOARD TRAYS

Platinum's 245 Model Tray Sealer offers a 10.5" wide film seal width. This extra width gives you greater flexibility and efficiency to seal containers over a greater range of sizes, often allowing for a multi-lane machine configuration.

The 245's generous eight foot overall length increases the area available for either manual or automatic product feeding as well as for automated tray dispensers. Optional overall lengths to 16 feet are offered. Our pop-out pallet design lets you change from one product size to another, making the 245 Model ideal for multiple product usage.

The Tray Sealer's fast, high recovery, thermocouple controlled heating system is

designed to direct maximum heat to the sealing surface. This feature gives the machine its ability to seal a wide range of lidding material at higher film sealing speeds.

Full size component parts are used for a long, productive life and ease of maintenance. Stainless steel construction permits washdown from the tray pallets to the floor, ideal for applications with strict sanitary requirements.

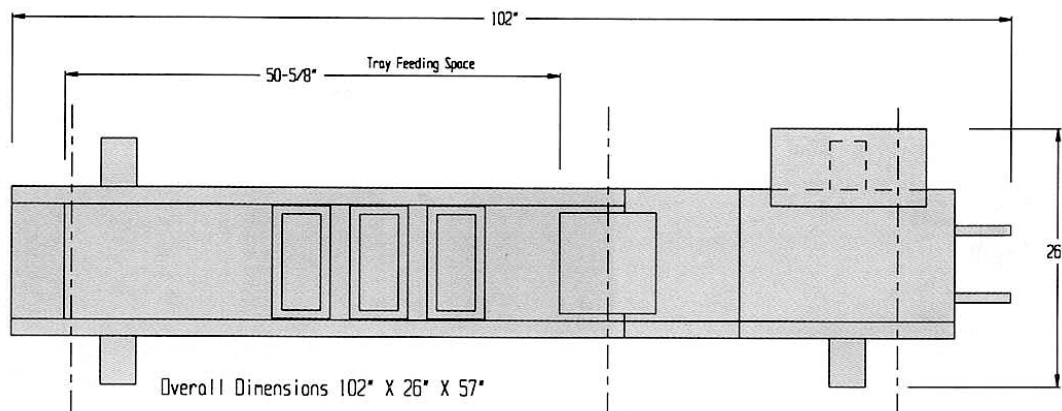

A full line of accessories will enable you to customize the 245 Tray Sealer for your specific needs. These include: Labellers, Tray De-Nesters and Automatic Filling Devices.
