PPG TEMP is one of our latest launches into the market. It combines the natural and “home-made” image provided by the paper with the excellent properties that TEMP film offers, allowing the material to be placed in the oven at high temperatures.

PPGTEMP reels are designed to be used in vertical or flow-pack machines achieving a high quality package, with unequal image and a safe and hygienic structure, where the customer can see the product packed through the transparent window.

DESCRIPTION Paper reels with a half-way clear strip and with a temperature resistant film lamination in the inside. Material designed for the packaging in flow-pack or vertical machines.

USE For the packaging of bakery products that need to be heated up in the oven once they are packed or those that need to be kept in warm cabinets.

Ideal for the packaging of certain bakery products like gluten-free breads to avoid cross-contamination inside the oven.

• sandwiches	• panini	• stuffed rolls	• hot-dogs	GLUTEN FREE BREADS
• hamburger	• pies	• focaccia	• wraps	

ADVANTAGES CVTEMP material adds value to the product packed:

- ✓ Gives a more natural and traditional image to the product packed.
- ✓ “Home-made” look. The product is perceived as carefully produced.
- ✓ Different image from competitors in the shelf line.
- ✓ The window allows the customer to see the product inside.
- ✓ The special TEMP film gives a clear advantage, allowing the product to be heated up once it is packed. Great hygienic improvement, especially for those ambiances where it is more necessary (gas stations, airports, train stations, self-service shops, self-service machines, etc.).

TEMPERATURE RESISTANT REELS
