THE PLATINUM PACKAGING GROUP

PLATSCRIBE

Resealable Packaging

We offer a very effective and unique reseal film. Each film is unique to the application. Look at the link below to show you what we have and how it can be used

In order to offer the correct solution, we would need the following.

- Die Cut Layouts for the film (see 1st attachment for an example). The machinery company who sold the machine will be able to offer this
- The machine will have a die cut take up waste roll (see 2nd attachment for an example), this would be useful to obtain (a few feet).
- Spec drawing of the container. (see 3rd attachment for an example)
- Lastly volumes, Film width, tray material, and a sample are all needed

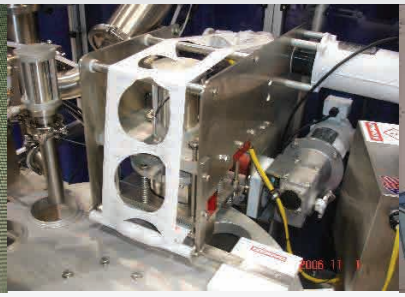

Package Details:

- What is the weight of the produce that will be in a single package?
- What temperature will the produce be at in the cold chain for the longest period of time? This would typically be the temperature in the retail case. If this isn't known, we will assume 6 °C.
- If there is a desired atmosphere (% O2 and CO2) that you want in the package, please let us know.
- For most common fruits and vegetables, we can recommend an atmosphere. More exotic produce may require additional shelf life testing to determine this.

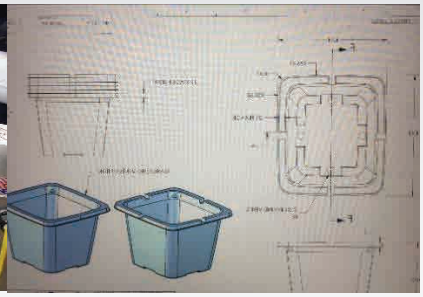

The 'Reseal film' lead time would take about 6 to 8 weeks to make once we get all the above details
